stokd.

FOR CORNER SHOPS & GROCERS

BARCODE SCANNING IN STOKD

Your phone is the stock scanner.

Count the shelves, catch the gaps, build the order and check deliveries in by scanning the barcodes already on your stock — on the phones you and your staff already carry. No handheld to rent.

1

Counting? Scan to find it.

Scan a pack while you count and **its card comes straight up**. Tap how many, next.

2

Empty shelf? Scan the gap.

Scan wherever something's low and it **goes on the order list**, under its supplier.

3

New line? Scan to add it.

Scan a pack Stokd hasn't seen and **it fills in the name** for you to check. The barcode stays on the item.

4

Delivery in? Scan it off the order.

Scan each case and **it's ticked off what you ordered**, and on the stock. What didn't come stays on order.

Does it pull up the real product?

Yes — for most food and drink.

Real names, from a real database
The first time a barcode is scanned, Stokd looks it up in Open Food Facts, a free, open database of food and drink, and fills in the name — never your prices or stock:

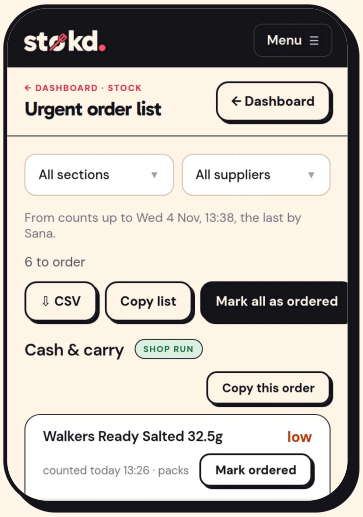

Walkers Ready Salted Crisps 32.5 g

Not everything is in there
Cigarettes, vapes, household goods and phone cards are often missing: type the name once and Stokd keeps it.

Called something else on your list?
The first scan asks which item it is — Goose Sriracha Mayo 500ml is your Sriracha mayo. Pick it once; every scan after finds it.

Price-marked packs and multipacks
A £1.25 price-marked bag has its own barcode. Add both to one item; either scan finds it.

No barcode at all?
Bananas, bakery, loose veg: Stokd prints its own shelf labels, 24 to an A4 sticker sheet.

The order list, by supplier: everything counted low or scanned as a gap, ready to copy and send.

READS Packs EAN · UPC | Outer cases ITF-14 | Shelf labels Code 128 WITH iPhone app | Chrome on Android | Bluetooth scanner

Fewer empty shelves
Gaps go on the order list the moment someone spots them, not on Thursday.

No more clipboard
Built for 500 to 2,000 lines. Scan, tap a number, next — no typing.

Your till, connected
Square, SumUp, Zettle and more: each sale comes off the stock as it's rung up.

The whole team can do it
Staff scan on their own phones, in 15 languages. Only managers add new lines.

Stock counts, scanning, the order list & deliveries: £50 a month per shop

Free forever: clock-in, rota and timesheets, for unlimited staff.

First 30 days: everything switched on, no card asked for.
